

Thermochromic Reveal

Communicating chilled refreshment

Unveil hidden messages or codes with multi-stage ink activation.

Why use this effect?

- Specialty ink that brings a new level of customer interaction to packages.
- Packaging reveals hidden messages in two stages.
- A dynamic addition to existing products or a great way to differentiate new products.
- Enables products to stand out in the fridge and during consumption.

Important things to know

- Thermochromic Reveal inks are printing inks which change their color when the can gets cold (stage 1) and again during consumption (stage 2).
- It provides a visual temperature indicator to indicate when the product inside the can is chilled to a designated temperature.
- Ink performance begins to deteriorate when exposed in direct sun for 6 hours.
- The Thermochromic Reveal effect is available on all can sizes.
- Elements created using Thermochromic Reveal ink should be placed in the main body of the can.
- We recommend design ideas are submitted to ensure the final artwork is feasible.*
- Compatible with cold-fill and pasteurization processes up to 82°C but not for retort.

Don't forget

- Lead Time: 6 weeks from artwork approval
- Minimum Order Quantity: 1 million units
