

Tactile Can

Feel the difference

Our tactile finish gives a fourth dimension to a design.

Why use this effect?

- Creates a wet look to highlight 'fresh and cold' appeal.
- Great for offering consumers a differentiated sensory experience with spot application, creating combinations of smooth and tactile on the can surface.
- Perfect way to highlight certain parts of the can.

Important things to know

- The tactile effect is achieved through a combination of ink and varnish adding texture to a design.
- The effect can create the look of little droplets and the feel of fruit skin, emphasizing the freshness of a brand and the ingredients used.
- It is possible to match special colors to a target.*
- Tactile elements should be placed in the main body of the can.
- We recommend design ideas are submitted to ensure the final artwork is feasible.*
- Compatible with cold-fill, but not for pasteurization processes or retort.

Don't forget

- Lead Time: Standard lead time applies
- Minimum Order Quantity: 1 million units
