

Incised Ends

More space on top of the can

The perfect end for promotions or to enhance the brand image.

Why use this effect?

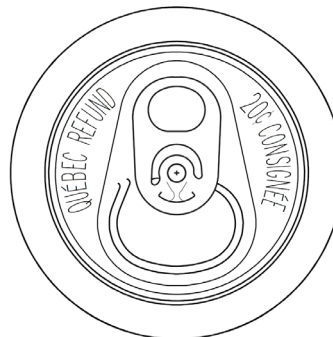

- Ideal for branding, deposit labelling or to drive promotional interaction.
- Target a messaging opportunity right before the moment of consumption.
- A communication canvas for key messaging and brand engagement.
- Subtle, elegant and efficient.

Important things to know

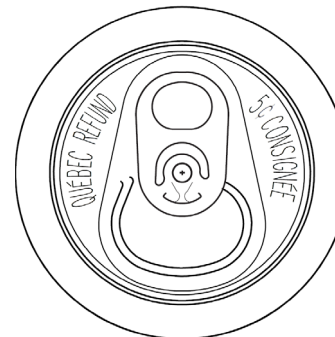

- Incising is a technique by which letters, numbers or designs are marked into the top of the can shell.
- Also available on colored ends.
- Available on 200, 202 and 206 diameter.
- Combination with other end products on request.
- We recommend you submit your concepts to ensure the final design is feasible.
- Compatible with cold-fill and pasteurization processes.

Don't forget

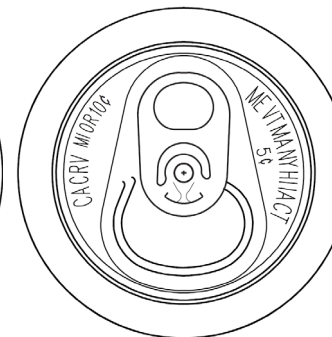

- Standard deposit designs are already available with a leadtime of 2-4 weeks.
- The 4 designs shown here are the only deposits offered as standard.
- Alternative designs will require new tooling at the customer's cost.
- New designs require 3 weeks for project development, 3 months for tooling, plus 2-4 weeks for production and shipping of the ends.
- Minimum Order Quantity: 2 million units
